

Speaking of the Future Making the World a Better Place

Haden Land
Vice President, Engineering & CTO
Lockheed Martin ISGS - Civil

Agenda

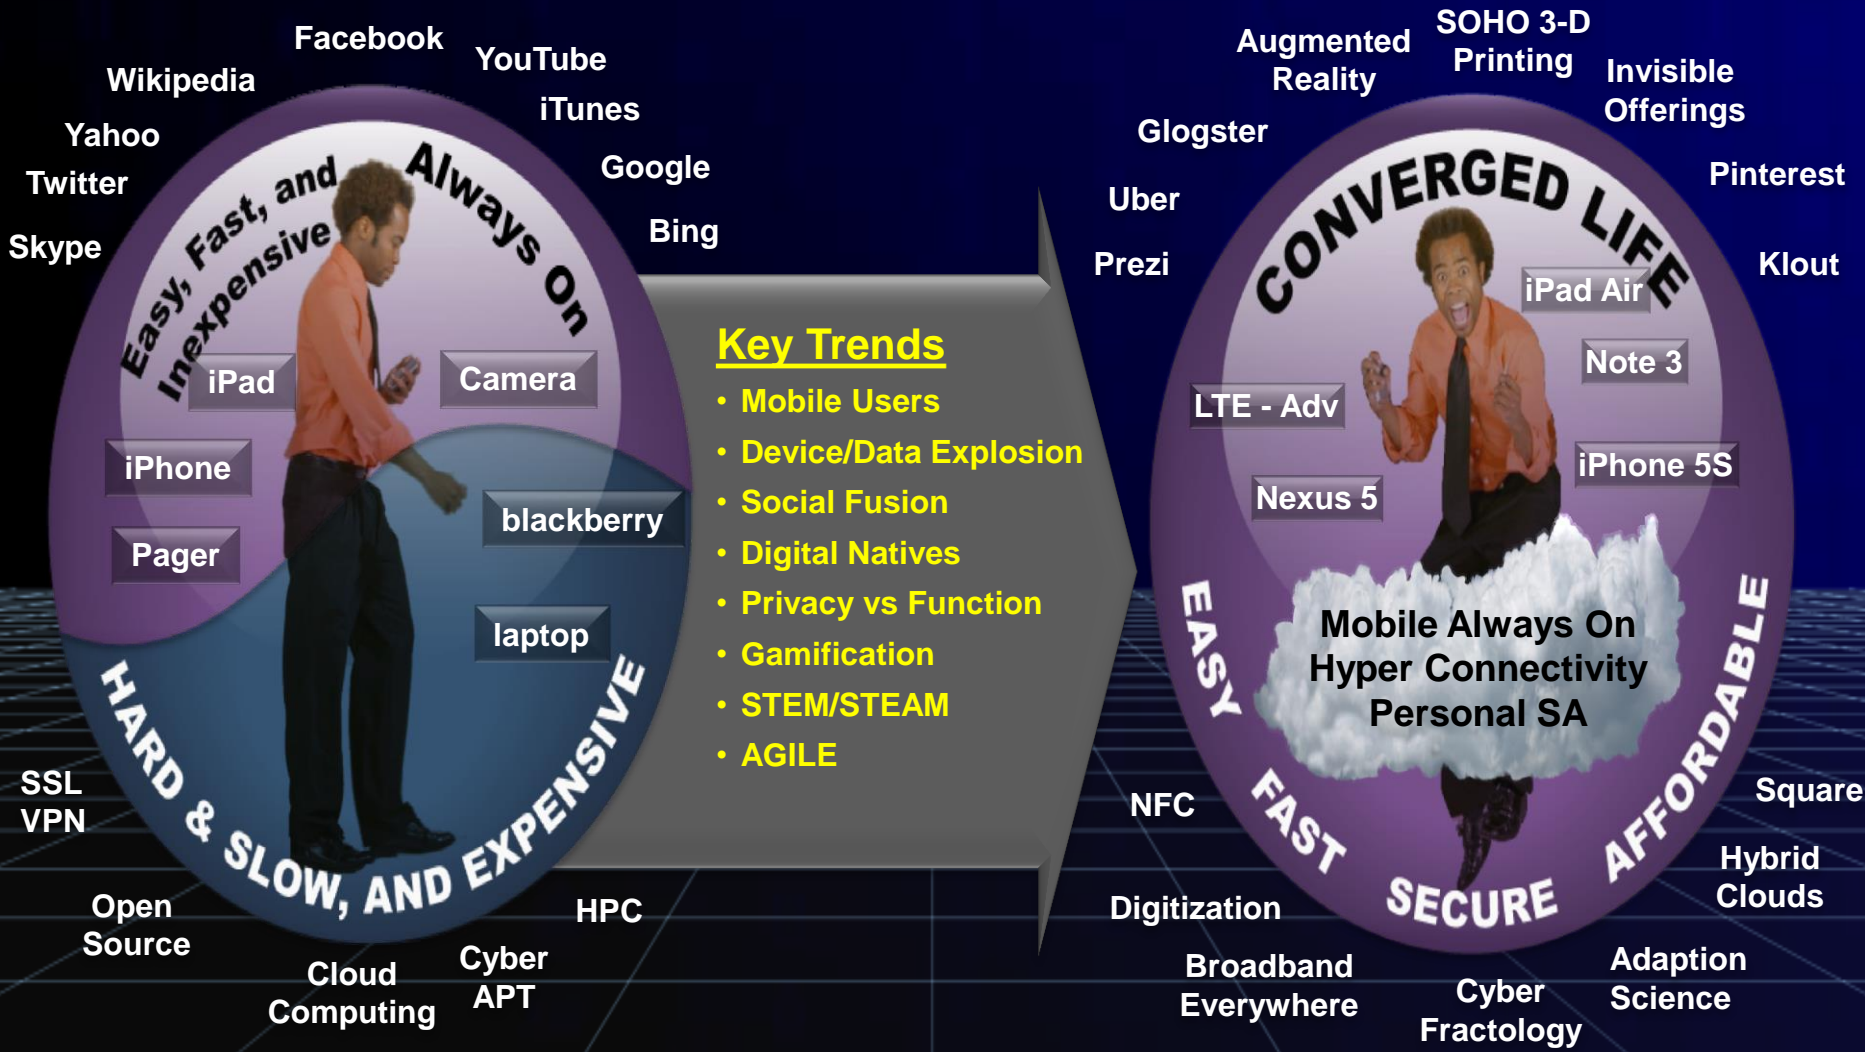

- **The Connected Planet**
- **Digitization**
- **New Careers and Innovation**
- **Securing the Future**
- **Trends and Big Plays**
- **Takeaway's**

The Connected Planet

Where We Are...Where We Are Headed

“When we change the way we communicate, we change society” – Clay Shirky

The Internet of Tomorrow?

Over 50% of Internet connections are things

2013: 15+ billion permanent, 50+ billion intermittent

2020: 30+ billion permanent, >200 billion intermittent; Zettabytes of streamed data

Remote sensing of objects & environment

Dimensional Audio

Cameras & microphones widely deployed

Quantum Health

Content & services via connected products

Life Coaches

Building & Infrastructure Management

Personal Safety AI

New routes to market via intelligent objects

Everything has a URL

Holographics

Reality Augmented

Seamless Translation

Situational Decision Support

Virtual Banking

Digitization

Digitization

Big Data... What is it? What is it good for?

VARIETY

“Big Data Solutions” –

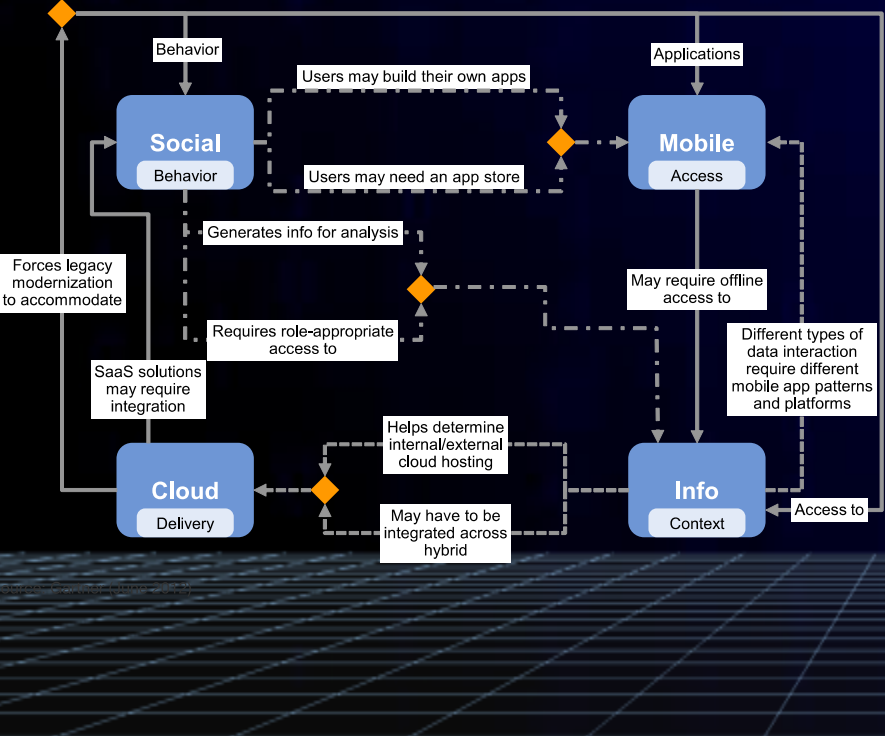

A **new** generation of technologies and architectures, designed to:

- (1) **economically** extract **value** from very large or complex data sets.
- (2) **Improve** performance and **reduce** O&M of existing Data Warehouses

VOLUME

VELOCITY

Hyper Connected World

Digital Hyperconnectivity Framework: Independent forces becoming interdependent

- Interact & reinforce one another and are **associated through complex dependencies**
- **Leverage this** convergence; but **requires rethinking** design, build, & delivery of systems
- **Cyber Security** has broad content and applicability supporting **digitization evolution**

Technology Surveys

Commercial

By 2016, **50% of global 1,000 companies** will have stored customer sensitive data in the public cloud.

Source: Gartner, 2012

Federal

100% of Fed agencies experimenting with cloud, targeting **\$20B in IT spend**

Source: Federal CIO Council, 2012

96% of the US population has a mobile phone, **40% now own a smartphone.**

Source: Google, 2012

35% of Fed Workers use smart phones, **43% by 2013**

62% of Fed Agencies **allow BYOD**

Source: CDW Federal Mobility Report, 2012

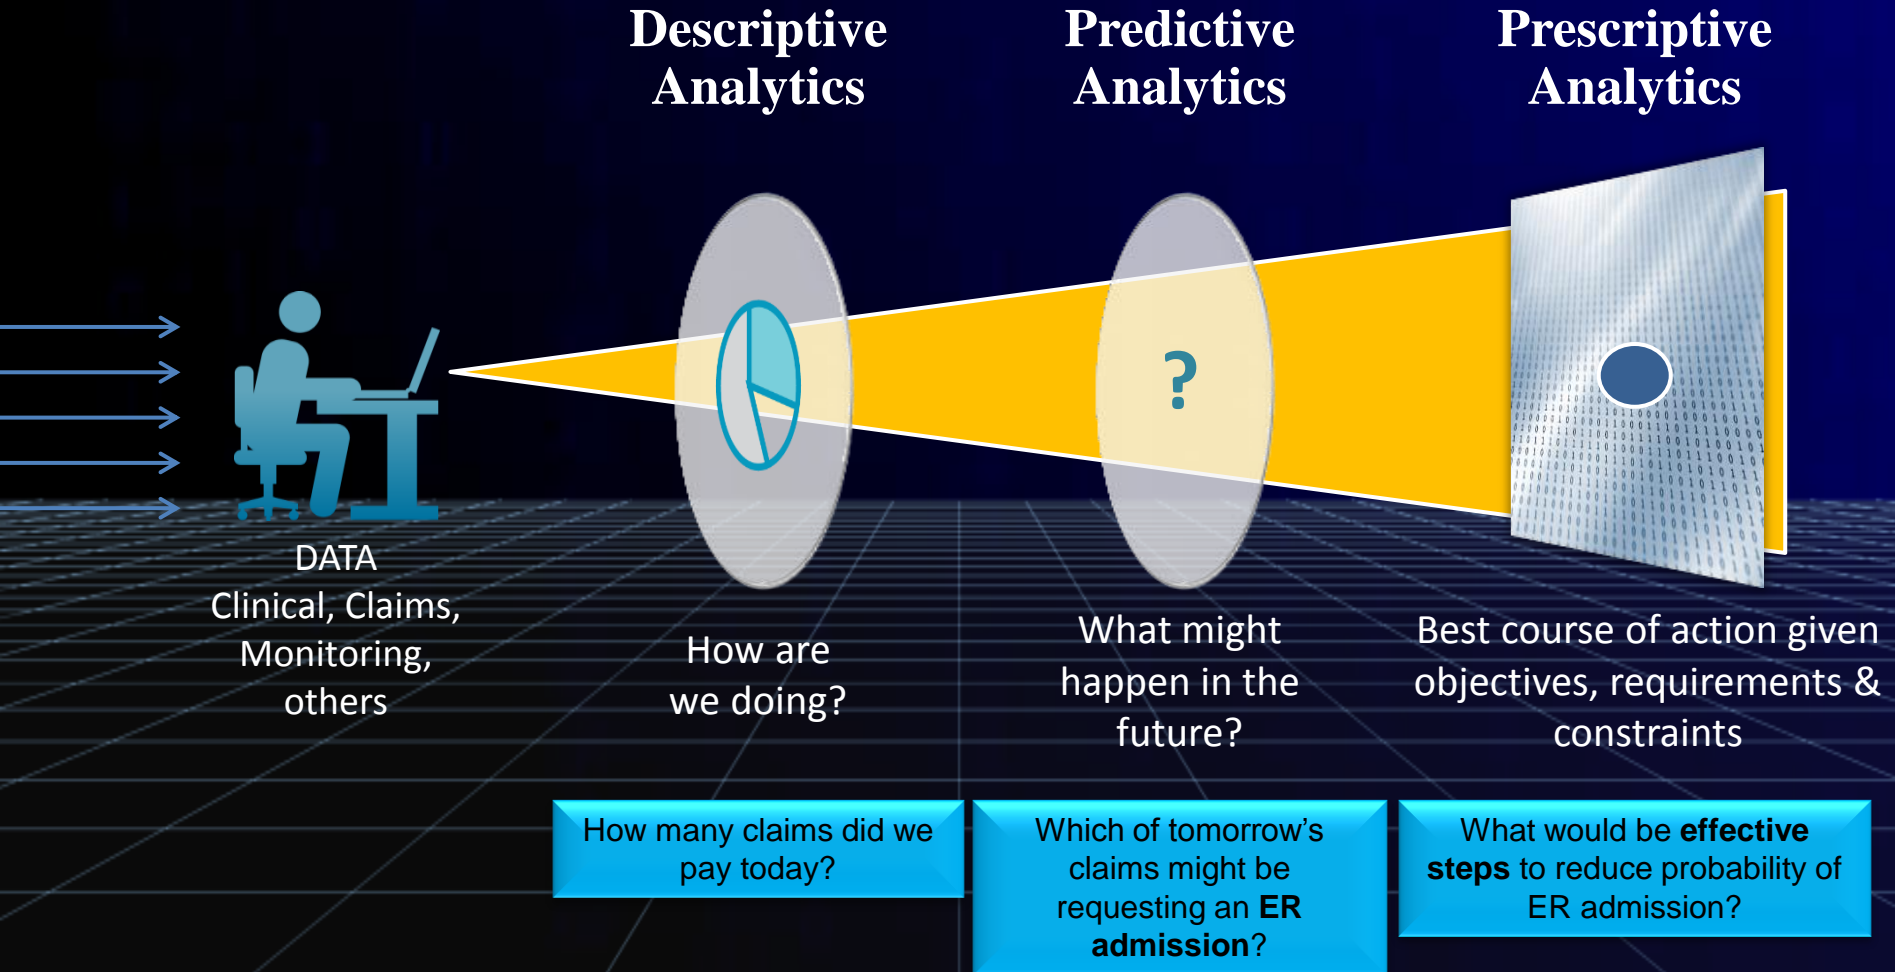

- *42% of respondents agree that Cloud computing is risky*
- *54% of respondents agree that mobile platforms are risky*

Source: IBM Global Risk Study

Greater Insights Need Improved Analytics

Today: Analytics is about what happened

Tomorrow: Analytics will be how we do business

*Adapted from CMS KDI by Vish Sankaran, CMS Advisor

Big Data “Top Five” Challenges

1

Information Explosion: Data growth in 5 years is **650%**, most unstructured

2

Legacy Environments: Can't easily support new fast and large datasets

3

Analytics: Too slow with current normal compute and processor abilities

4

Security: More data = Greater spill risk

5

Visualization – Complex challenge in providing Peta-byte data understanding for humans; let alone Yotta-byte

Big Data Trends

Data Scientist Profession Preparedness

Lockheed Martin to launch Data Scientist LifeJourney... to inspire millions of students about big data.

"The Data Scientist LifeJourney is one of 250 LifeJourney experiences led by leading companies like Lockheed Martin ([click here to see the list](#)) LifeJourney will allow students around the country and around the world to experience one of the most interesting and fulfilling careers as it utilizes both the analytical and creative elements of the STEAM skillset (science, technology, engineering, arts and math)."

New Careers and Innovation

Web Archeologist – Collector of non-digital information. Relates data to perspectives based upon time and culture.

Abilities: Has access to data snapshots of public content over time and can analyze interesting patterns of difference

Quantum Linguist – Holistic Access of All Knowledge regardless of language

Abilities: Understands language constructs, tools involved, semantic / cultural reference, and disparate group interactions

Neuromorphic Architect – “Just In Time” Knowledge

Abilities: Understands brain (not just human) morphology and the ways data moves into and out of it. Can break through barriers of data congestion and overload.

Medical Mathematician – Leverages algorithmic similarities between chemistry, human biology, environment, EM spectrum, and nano-scale structures.

Abilities: Understands human biology as a complex adaptive system

Innovate Our World

Microfluidics Engineer

Creating the next generation of innovators through left brain, right brain fusion.

Crypto-Privacy Engineer

Securing the Future

Our Perspective - The "Five Domains"Secured

Global Spend to Defend!

2014: \$100 Billion +

2013: \$86 Billion

2012: \$60 Billion

2011: \$55 Billion

Gartner 2013 Projections

Evolving Cyber Landscape & Threat Vectors...Internet of Everything

Secure Mobile Apps and Smart Devices as Control Points

Situational Awareness

- Blue Force Tracking
- Graphic Overlays
- Digital map

BioLert

- Facial recognition
- Quick response: "Detain or Release"
- Subject personal information

GyroCam

- Streaming video
- Camera control
- High resolution day/night video

ISRTube

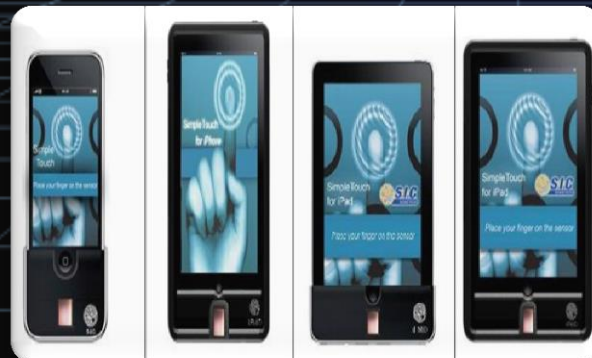

- Searchable INTEL repository
- Query for videos, photos, reports
- Post SPOT reports

Android iPhones Tablets Laptops Type I Devices

BYOD:
If it is WiFi enabled,
then it can securely connect

Takeaway's

- **The Connected Planet** – Greater access to knowledge will increase Global innovation synergies
- **Digitization** – Big Data plays a greater role in making important sense out of ever growing data stream chaos
- **New Careers and Innovation** – Lets explore new ways to foster STEM and STEAM campaigns
- **Securing the Future** – With more data there is more risk. We need to work together to find new ways to protect Privacy
- **Trends and Big Plays** – Without “Grand Visions” we can’t leverage the mind power of our collective innovation
- Next Hype will be Application of Big Data to selective [Complex Adaptive Systems](#)

The Next 100 Years
